- Introduction**  
 FTTH in a kind of self-supporting with the introduction of covered wire cable for wiring installation process, using its self-supporting structure of coiled wire or folder by double character the way for docking with the special type of metal, and then passed to the anchor tension load technical program, including regular use of the anchor connection scenarios, so that construction and installation specifications, safety, quick and easy, and to laying straight in use, easy to remove the waste when the basic installation process requirements to ensure that the use of does not damage the fiber and steel wire.

- Features:**
- Laying straight appearance
  - Easy to carry and single construction
  - Do not rely on tooling
  - Installation is simple, rapid
