

25 Pair Splicing Module Specifications

Product Description:

25 Pair Modular Splicing, 25 Pair Splicing Module, 25 Pair Module Origin: China Price: To Talk About Specification: Splicing Modules provide the reliability of soldered connection, the efficiency of multi-pair splicing, plus the proven performance of Splicing System. Modules are available in pluggable and splicing versions. Pluggable modules allow interruption-free transfer of circuits.

The 4000-G/TR connector module accepts a large variety of insulation and conductor diameters: 22-28 AWG (0.63 mm – 0.32 mm). The small size of the 4000-G/TR connector module allows splice bundles to be smaller, improving housekeeping and reducing the costs associated with larger diameter closures.

Benefits

- Resists high humidity and environmental elements
- High-speed and high-bandwidth transmissions
- Reduces installation time and reworking demands
- Gas-tight, solder-equivalent connections
- Enables testing without opening the module or interrupting service
- Enables easier pair identification and troubleshooting
- Requires minimal training
